SOA COMPOSER

SOA Composer provides CA Gen developers with the capability to design and generate EAB source code that creates XML documents and SOAP messages for your CA Gen application.

Now, you can turn your CA Gen transaction into either a consumer or provider of web services without needing to know the intricacies of XML and SOAP. SOA Composer handles all of the issues related to the structural and data content validation of XML documents and messages as well as domain conversion and data formatting.

Using the tool's built in code snippet capability, SOA Composer can generate platform-specific customized code that handles the technical and security issues related to sending or receiving SOAP messages from the internet.

SOA Composer allows developers to focus on the business logic associated with the CA Gen application rather than the design and syntax of the SOAP messages and the issuing of the web service call.
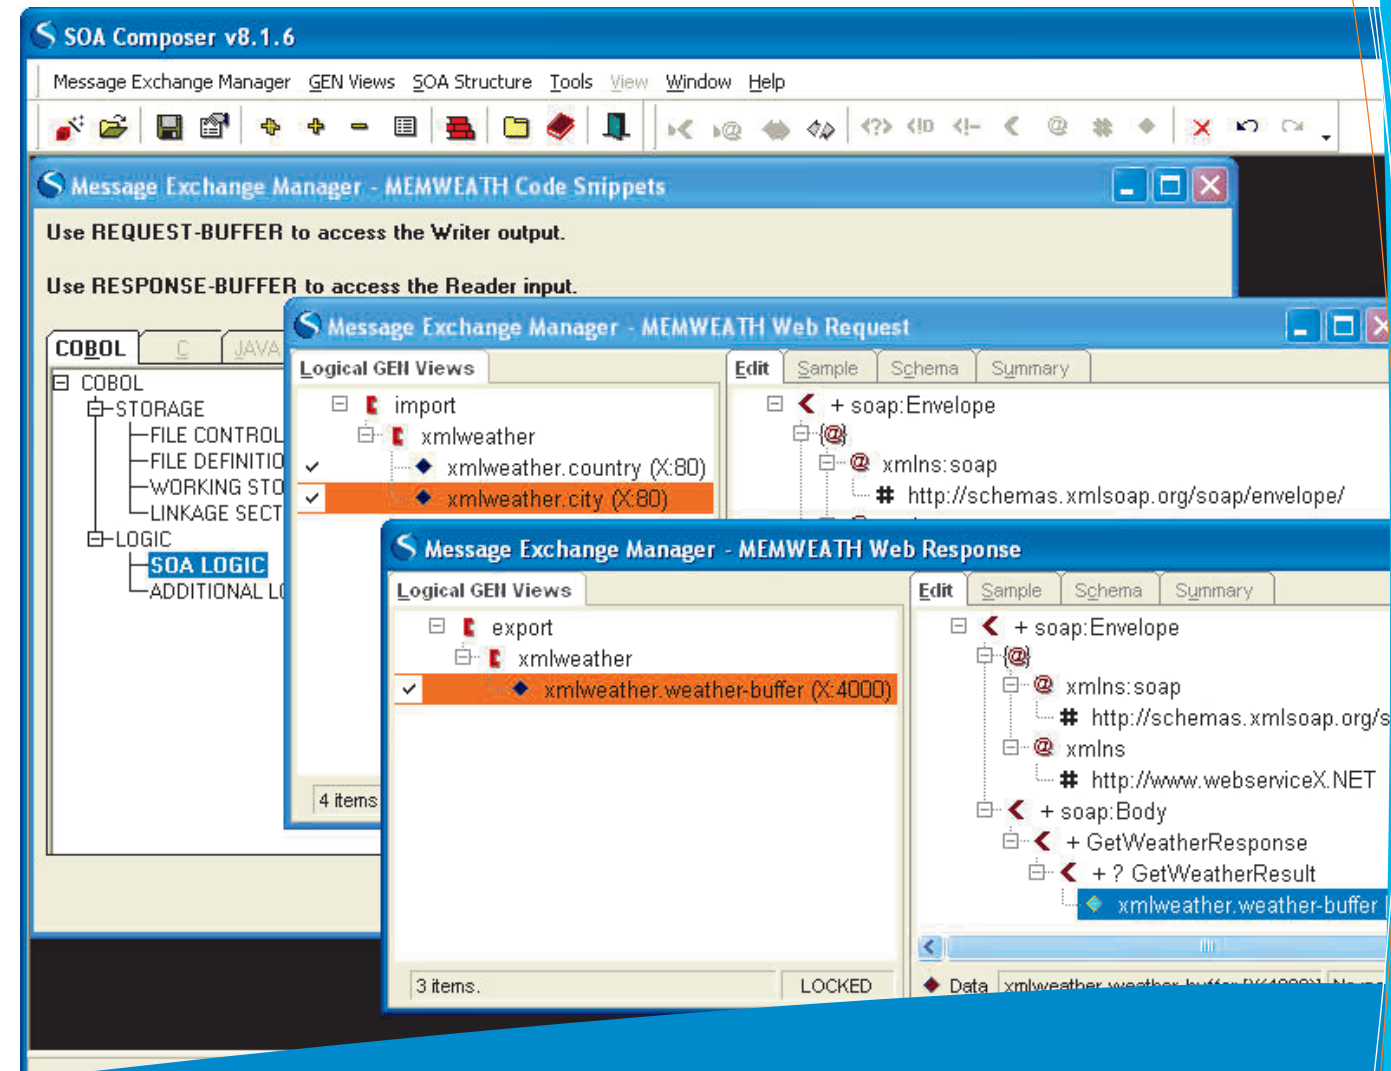

BENEFITS

- Creation of SOAP Request and Response handlers for both consumers and providers of Web Services
- Validation of XML documents and SOAP messages for content and structure
- Conversion of attribute domains between CA Gen views and XML definition
- Mapping of CA Gen views to XSDs, WSDLs, XML samples and custom XML structures
- Generation of EAB source code for all CA Gen platforms
- Built-in customizable code snippets for platform-specific internet access

OUR COMMITMENT TO CA GEN USERS

Canam Software is committed to the continued delivery of innovative and cost effective solutions for the CA Gen user community. We are the only reporting and XML vendor that has consistently provided solutions for the diverse and growing technology target platforms supported by CA Gen. Our XML solution has grown with the capabilities of CA Gen, from basic XML readers and writers to the creation of SOAP interfaces for the web. We continue to work towards providing effective solutions to the CA Gen community keeping in mind the need to protect your investment against future technology changes.
